Logistic Regression Project

Submitted on November 15, 2023

PROMPT

Part B has the following directions:

Generate a vector x of length N with values lying between limits Xa and Xb (for this you will have to choose your own limits; play around with different values) and apply the **gen_logistic** function to this vector. Proceed to plot the output and verify the shape of the output. If your decision boundary value is about the center of your x range, you will see an S-shape.

Upload a screenshot or copy of an S-shaped sigmoid curve you generated in this section of the lab.

Sigmoid Plot

```
N = 100 #1
Xa = -20
Xb = 20
w = 1 #10 #0.1 #1
b = 0 #-1 #0

```
