8.5.R1 (1/1 point)

In order to perform Boosting, we need to select 3 parameters: number of samples B, tree depth d, and step size λ.

How many parameters do we need to select in order to perform Random Forests?:

2

2

Answer: 2

EXPLANATION

To perform Random Forests we need to select 2 parameters: number of samples B and m= number of variables sampled at each split.
