Assessment 1
Graded Assignment • 15 min

Due Aug 8, 11:59 PM IST

Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 50%. We keep your highest score.

Next item

1. Which steps are involved in setting up the runtime and training a GAN model in Google Colab? 1 / 1 point

- [ ] Uploading the dataset to Kaggle
- [x] Connecting to Google Drive

  Correct
  Correct! Connecting to Google Drive is essential to save and load files during the process.

- [x] Executing the training code

  Correct
  Correct! Running the training code is a fundamental step in training the GAN model.

- [x] Setting up the runtime environment

  Correct
  Yes! Setting up the runtime environment in Google Colab is crucial for executing the code.

- [ ] Installing TensorFlow on your local machine

2. Which neural network is best suited for processing sequential data? 1 / 1 point

- (●) Recurrent Neural Network (RNN)
- ( ) Feedforward Neural Network (FNN)
- ( ) Generative Adversarial Network (GAN)
- ( ) Convolutional Neural Network (CNN)

  Correct
  Correct! RNNs are designed to handle sequential data and maintain temporal dependencies.

3. What is the primary purpose of a Generative Adversarial Network (GAN)? 1 / 1 point

- ( ) To reduce the dimensionality of data
- ( ) To optimize the performance of neural networks
- ( ) To classify data into predefined categories
- (●) To generate data that is similar to a given dataset

  Correct
  Correct! GANs are designed to generate new data that resembles a given dataset.

4. Which of the following statements accurately describe the process of upsampling in the context of Generative Adversarial Networks (GANs)? 1 / 1 point

- [ ] It involves reducing the dimensionality of the data.
- [x] It is achieved through techniques like transposed convolution.

  Correct
  Correct! Transposed convolution is a technique commonly used for upsampling.

- [ ] It always results in perfect images.
- [ ] It is a technique applied by the discriminator.
- [x] It is used to increase the resolution of generated images.

  Correct
  Correct! Upsampling is used to increase the resolution of images generated by the GAN.

5. Which technique is commonly used by the discriminator in a GAN to improve its performance? 1 / 1 point

- ( ) Pooling
- (●) Batch normalization
- ( ) Gradient clipping
- ( ) Upsampling

  Correct
  Correct! Batch normalization is used to stabilize and improve the performance of the discriminator.
