RUBRIC

Use the provided notebook to check the student's answers. Be aware that some questions may involve randomness or simulation, and thus will have different values than the ones in the solution.

C3M2_peer_reviewed_v2 - Solutions
HTML File

Did the student submit either a .html, .pdf, or .doc/docx filetype?

- 0 points
  No
- **1 point**
  Yes

1. (a) Did the student correctly prove the MLE?

- 0 points
  No reasonable attempt was given.
- 6 points
  The student made an attempt, but there were major mathematical issues or unexplained leaps in logic.
- 10 points
  The student made an attempt, but there were minor mathematical problems.
- **15 points**
  The student proved the MLE with clear and correct mathematics and logic.

2. (a) Did the student correctly fit a Poisson model to a training set, calculate the MSPE, and display the results of that model?

- 0 points
  No reasonable attempt was given.
- 3 points
  The student fit an incorrect model to the data. This includes fitting the incorrect parameters or not using a Poisson Regression Model.
- 6 points
  The student fit the correct model to the data, but did not use a training set **and** did not calculate the MSPE.
- 9 points
  The student fit a correct model to the data, but did not use a training set **or** did not calculate the MSPE.
- **12 points**
  The student fit the correct model, calculated all necessary parts, and displayed all necessary information.

2. (b) Did the student construct a reduced model, calculate its MSPE, and choose the best model to use based off a conducted statistical test?

- 0 points
  No reasonable attempt was given.
- 2 points
  The student chose the full model, which was incorrect.
- 3 points
  The student chose the reduced model, but did not calculate the MSPE or justify their choice.
- 4 points
  The student chose the correct model and calculated the MSPE, but did not justify their choice with a statistical test.
- **5 points**
  The student chose the correct model, calculated the MSPE, and justified their choice with a statistical test.

2. (c) Did the student correctly perform chi-squared tests and interpret the results?

- 0 points
  No reasonable attempt was given.
- 3 points
  The student incorrectly calculated their chi-squared tests and incorrectly interpreted their results.
- 6 points
  The student correctly calculated their tests but interpreted their results incorrectly.
- 9 points
  The student incorrectly calculated their tests but interpreted their results correctly.
- **12 points**
  The student performed the correct calculations and interpretations.

2. (d) Did the student correctly create and interpret the plot?

- 0 points
  No reasonable attempt was given.
- 3 points
  The student made an incorrect plot.
- 6 points
  The student made the correct plot but interpreted it incorrectly.
- **8 points**
  The student constructed the correct plot and interpreted it correctly.

2. (e) Did the student correctly interpret and discuss the overdispersion of both models?

- 0 points
  No reasonable attempt was given.
- 5 points
  The student interpreted the overdispersion incorrectly, and came to the wrong conclusions.
- 8 points
  The student had the correct conclusions, but for only one model.
- **10 points**
  The student interpreted the overdispersion of both models correctly.
