7.3.R1 (1/1 point)

In terms of model complexity, which is more similar to a smoothing

spline with 100 knots and 5 effective degrees of freedom?

- (•) A natural cubic spline with 5 knots ✔
- ( ) A natural cubic spline with 100 knots

EXPLANATION

Even though the smoothing spline has 100 knots, it is

penalized to be smooth, so it is about as complex as a model with 5

variables. The natural cubic spline has 5 degrees of freedom is such a

model.
