1. Which of the following changes might be necessary when generating synthetic images using a trained GAN model? 1 / 1 point

- [ ] Modifying the learning rate.
- [ ] Updating the weights of the discriminator.
- [x] Tweaking the input noise vector.

  Correct
  Well done! Tweaking the input noise vector is a common practice to generate different synthetic images.

- [ ] Changing the activation functions in the network.
- [x] Adjusting the latent vector.

  Correct
  Correct! Adjusting the latent vector can lead to variations in the generated images.

2. When conducting SA training using Google Colab and GPU, what is one key advantage of utilizing the GPU? 1 / 1 point

- (•) Faster computation speeds for training models.
- ( ) Better integration with Python libraries.
- ( ) Reduced cost compared to using CPU.
- ( ) Increased accuracy of the trained model.

  Correct
  Correct! Utilizing a GPU significantly speeds up computation, which is crucial for training complex models like GANs.

3. Which of the following steps are involved in loading the Fashion MNIST dataset using Keras? 0.8 / 1 point

- [ ] Preprocessing the images
- [ ] Initializing the DCGAN model
- [x] Splitting the dataset into training and testing sets

  Correct
  Correct! Splitting the dataset into training and testing sets is a common step when working with datasets.

- [x] Importing the Keras library

  Correct
  Correct! Importing the Keras library is a necessary step to load the Fashion MNIST dataset.

- [x] Loading the dataset using keras.datasets.fashion_mnist

  Correct
  Correct! The Fashion MNIST dataset can be loaded directly using keras.datasets.fashion_mnist.

  You didn't select all the correct answers

4. What is the primary purpose of using a deep convolutional GAN in generating fashion images? 1 / 1 point

- ( ) To increase the resolution of existing fashion images
- ( ) To classify different types of fashion items
- (•) To generate high-quality synthetic fashion images
- ( ) To reduce the size of the fashion dataset

  Correct
  Correct! Deep convolutional GANs are specifically designed to generate high-quality synthetic images, including fashion images.

5. What is a common challenge encountered during the training of a deep convolutional GAN on a fashion dataset? 1 / 1 point

- ( ) Insufficient computational resources for training
- (•) Mode collapse, where the GAN generates very similar images
- ( ) Overfitting to the training dataset
- ( ) Difficulty in labeling the training dataset

  Correct
  Correct! Mode collapse is a common issue in GAN training, where the generator produces limited diversity of images.
