Iris

Donated on 6/30/1988

A small classic dataset from Fisher, 1936. One of the earliest known datasets used for evaluating classification methods.

Dataset Characteristics	Subject Area	Associated Tasks

Dataset Information

What do the instances in this dataset represent?

Each instance is a plant

Additional Information

This is one of the earliest datasets used in the literature on classification methods and widely used in statistics and machine learning. The data set contains 3 classes of 50 instances each, where each class refers to a type of iris plant. One class is linearly separable from the other 2; the latter are not linearly separable from each other....

SHOW MORE

Has Missing Values?

No

Introductory Paper

[The Iris data set: In search of the source of virginica]

By A. Unwin, K. Kleinman. 2021

Published in Significance, 2021

Variables Table

Variable Name	Role	Type	Demographic	Description	Units	Missing Values
sepal length	Feature	Continuous			cm	no
sepal width	Feature	Continuous			cm	no
petal length	Feature	Continuous			cm	no
petal width	Feature	Continuous			cm	no
class	Target	Categorical		class of iris plant: Iris Setosa, Iris Versicolour, or Iris Virginica		no
