Module 3: Charting Fundamentals

Practice Assignment

Assignment 3

- **Lab:** Building a Custom Visualization
  1h
- **Reading:** Assignment Reading
  30 min
- **Peer-graded Assignment:** Building a Custom Visualization
  2h
- **Review Your Peers:** Building a Custom Visualization
- **Reading:** Understanding Error Bars
  10 min

Peer-graded Assignment: Building a Custom Visualization

You passed!
Congratulations! You earned 11 / 11 points. Review the feedback below and continue the course when you are ready.

Instructions My submission Discussions

Some of your fellow learners have submitted their reviews anonymously. All names are still visible to course instructors.

Sample-Oriented Task-Driven Visualizations - A matplotlib implementation

Submitted on September 12, 2024 Shareable Link

PROMPT

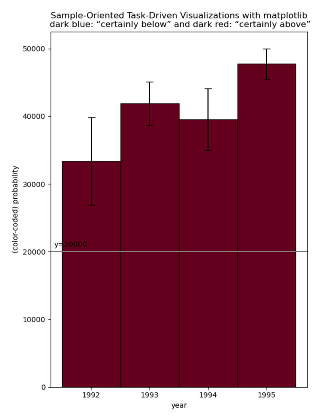
Identify the challenge level that you chose for the assignment:

- Easiest
- Harder
- Even harder
- Hardest

Attempted the visualization corresponding to the choice

- **Even harder**

Animated output



RUBRIC

Did the learner identify the challenge level that they chose for the assignment (e.g., easiest, harder, even harder, or hardest)?

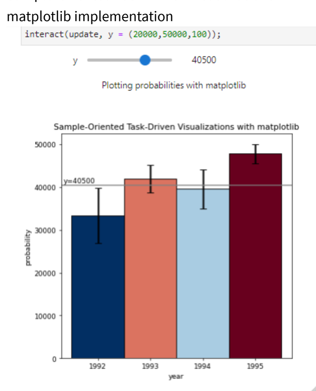
0 points
No, the learner did not identify the challenge level that they chose for the assignment.

1 point
Yes, the learner did identify the challenge level that they chose for the assignment.
CL

PROMPT

Upload an image of your visual.

Sample-Oriented Task-Driven Visualizations - A matplotlib implementation



Sample-Oriented Task-Driven Visualizations - A matplotlib implementation

RUBRIC

Did the learner upload their visual?

0 points
No, the learner did not upload their visual.

1 point
Yes, the learner did upload their visual.
CL

Did the learner implement the bar coloring using a color scale with at least three colors?

0 points
No, the learner did not implement the bar coloring using a scale with at least three colors.

3 points
Yes, the learner did implement the bar coloring using a scale with at least three colors.
CL

Did the learner provide a y-axis value of interest in the visual? Note: The hardest option will have a range of y values.

0 points
No, the learner did not provide a y-axis value of interest in the visual.

3 points
Yes, the learner did provide a y-axis value of interest in the visual.
CL

Did the bar colors reflect the bar's position with respect to the y value? Note: The hardest option will have a range of y values.

0 points
No, the bar colors do not reflect the bar's position with respect to they y value.

3 points
Yes, the bar colors do reflect the bar's position with respect to they y value.
CL

Based on the challenge level that the learner chose for this assignment, comment on the quality of the elements that are specific to each option:

- **Easier option:** The bar colors reflect the bar's position with respect to the y-axis value (e.g. blue if the bar is below the y value, white if the bar is the same as the y value, and red if the bar value is above the y value).
- **Harder option:** The bar colors reflect the bar's position with respect to the y-axis value (e.g. a gradient ranging from dark blue for the distribution being certainly below this y-axis, to white if the value is certainly contained, to dark red if the value is certainly not contained as the distribution is above the axis).

Note: for the remaining two options, you will need to run the code that the learner has uploaded in order to test the interactivity. We recommend that you run the code on the Jupyter notebook system on the Coursera platform.

- **Even harder:** Added interactivity that allows the user to click on the y axis to set the value of interestThe bar colors change appropriately with respect to what value the user has selected.
- **Hardest:** Added interactivity that allows the user to interactively set a range of y values they are interested in, and recolor based on this (e.g. a y-axis band, see the paper for more details).
