Practice Quiz 2.2.1. Challenges in DDoS Defense

coach

1. Why it is so technically challenging to defend DDoS attacks? Ready to review what you've learned before taking the quiz? I'm here to help.

1 / 1 point

Select all that apply. Help me practice Let's chat

☒ Attack traffic are often IP spoofed and therefore it takes time to track down the source of the attacks.

Submit your assignment

Correct

Correct. It is so easy to change the source IP address of a packet and there is no authentication protection in the IPv4 packet such as signing the IP address with source private key and verifying them in IP routing protocol.

Try again

☒ The attack traffic can come from a different ISPs. Therefore it is difficult to pursue and track down them, unless there is agreement among the ISPs.

Receive grade

Correct

To Pass 80% or higher

Correct. The path is often across legal, political, business boundaries.

Your grade

☒ Even if there is an agreement along the ISPs/authorities of the path, the verification of the request and the correlation of incoming and outgoing switch ports will take time.

100%

Correct

Correct. Partly this is due to the IP spoofing.

We keep your highest score

☒ Large numbers of IoT devices with weak passwords and vulnerable protocols/system modules. Even if we track down their locations, it is difficult to demand and require the security patch without common agreeable regulations for enforcement.

Correct

Like Dislike Report an issue

Correct.

☒ By the time we reach the source of the attacks, the real master mind already long gone and its user may not recognize their machine are being hijacked for bad purpose.

Correct

Correct.

2. Why it is legally so challenging to defend against DDoS attacks?

1 / 1 point

Select all that apply.

☒ It is rather difficult to prosecute someone unwillingly involved in DDoS attacks in a different countries.

Correct

Correct. Depending on the vendors, there may not be security patches available.

☒ By the time we reach the source of the attacks, the real master mind already long gone and its user may not recognize their machine are being hijacked for bad purpose.

Correct

Correct. Verifying whether the target user is responsible can be challenging.
