 [Week 4 \(/learn/analytics-excel/home/w...\)](#) >
 [excel/supplement/BmRNN/feedback-survey\)](#) >
 [excel/lecture/BIIAC/introducing-the-gaussian\)](#)

You will need the Excel workbook Linear Regression to master the instructional content and successfully complete the quizzes for the two Lessons in Week 4.

The Excel workbook contains a series of sheets applicable to the concepts covered in the video lectures. You will use the relevant sheets to complete exercises for the week.

The Linear Regression Workbook can be downloaded by clicking on the button below:

Linear Regression Workbook.xlsx (<https://d3c33hcgw...>)

Here is a table listing the Excel sheets associated with each video lecture in Linear Regression. Note that you will see additional information in the sheet title, but we will always direct you to the correct sheet by the hyphenated number that begins the sheet title.

Video	Excel Sheet
Introducing the Gaussian	5-1
Introduction to the Gaussian Probability Distribution, Part 2	5-1
Introduction to the Gaussian Probability Distribution, Part 2	5-1
Central Limit Theorem	5-2, 5-2A
Algebra with Gaussians	5-3
Markowitz Portfolio Optimization	5-4
Introduction to Standardization	5-5
Standardization and Linear Regression	5-6
Confidence Intervals for Linear Regression Models	5-7
Linear Regression with More than One Input Variable	5-8
Differential Entropy and Information Gain from Linear Regression	5-9

Important! Please note that NOT every video lecture will have an associated Excel workbook sheet. Also, be aware that some Excel workbook sheets will be used in more than one video lecture. Therefore, you will sometimes see the same Excel workbook sheet

cited for use in multiple video lectures.
