The final course project is a comprehensive assessment covering all of the course material and will take approximately 6-8 hours to complete. There are two ways to approach the completion of the final project. You may wait until you complete all the course material and then complete the final project. However, the sections of the final project have been designed so that you may complete them after completing specific sections of the course. This design allows you to complete parts of the final project as you progress through the course. Only the peer review section will require you to complete almost the entire course before undertaking that section of the final project.

The sections of the final project relate to the course in the following way:

- Final Project, Part 1 Quiz: material assessed is from Weeks 1 and 2
- Final Project, Part 2 Quiz: material assessed is from Weeks 1 and 2
- Final Project, Part 3 Quiz: material assessed is from Week 3
- Final Project, Part 4 Quiz: material assessed is from Week 4
- Final Project, Part 5 Peer Review: Assesses the material from the entire course.

We strongly encourage you to complete the relevant sections of the final project as you finish that specific section in the course. We see a twofold benefit from this approach, 1) you can better assess your mastery of the course material as you move through the course and 2) the time it will take you to complete the final project will be distributed over the six weeks of the course instead of being compressed into one week.

Important: As you complete each answer in the final project, save your answers outside of the quiz. You can save your answers in Microsoft Word, a text editor. or any other page where you can access these answers again. You will need to turn to some of your responses again for the the peer review (part 5).
