Getting Help

If you get stuck or are confused about a topic, please let us know! One of the big advantages of taking an online course is that instructors and students can help each other during the learning journey.

Please use the [discussion forum](#) to post questions, and please post your question in the relevant week. Before posting, I highly encourage you to use the search function to see if someone else had a similar question. It's possible that your question has already been answered by an instructor or another student!

At the end of each section, I will add several articles or videos as "recommended reading." These are optional to complete the course, but they offer further insights into some of the topics that we are not able to dive into during the course. For example, we broadly cover convolutional neural networks in a lecture, and I will list several articles in the recommended reading section should you wish to learn more about them.
