1. Is the following statement about interleaving program graphs True or False?

1 / 1 point

Two program graphs can be interleaved if they do not share any common actions.

✔ Nice work

2. Given two program graphs, PG1 has 4 locations, and the other one PG2 has 9 locations. How many locations are in the program graph obtained by interleaving PG1 and PG2?

1 / 1 point

✔ Nice work

3. Let PG1 and PG2 be two program graphs, and TS(PG) be the transition system derived from a program graph PG. Under what condition does the equivalence below hold?

1 / 1 point

$$TS(PG1) ||| TS(PG2) = TS(PG1 ||| PG2)$$

✔ Nice work

4. Which of the following statements are true about the critical and non-critical actions of program graphs? Identify all that are true.

1 / 1 point

✔ Nice work

5. Is the following statement about the atomicity of actions True or False?

1 / 1 point

An action represents a sequence of operations such that their execution is indivisible.

✔ Nice work

6. Let coarse-grained atomicity refer to a model where each action represents a long sequence of operations, and fine-grained atomicity refer to a model where each action represents a short sequence of operations. Identify which of the following statements are true. Select all that are correct.

1 / 1 point

✔ Nice work
