Your latest: 100% • Your highest score: 100% • To pass you need at least 80%. We keep your highest score.

Next item

1. Which of the following statements about the Naive Bayesian classifier is correct? 1 / 1 point

A. It is suitable for text classification such as spam filtering.
B. It does not assume conditional independence.
C. If the frequency of the given data is zero, you can set the parameters to solve the performance degradation.

- A
- B, C
- A, C
- A, B, C

2. Which of the following statements about the Naive Bayesian classifier is incorrect? 1 / 1 point

- The independent condition of probability is required.
- Generally used for 'diagnosis' and 'string classification'.
- It can be used even when the data set is very large.
- The calculation formula is complicated and difficult to use, but mostly reliable results are obtained.

Correct
