Assignment details

Correct

Due

Attempts

Submitted

[x for x in 'abc'] returns ['a', 'b', 'c']

It will return the string "abc".

Try again

2. What is it called when a function is defined inside a class? 1 / 1 point

☐ Subfunction

☐ Class

☐ Module

☒ Method

Your grade

To pass, you need at least 80%. We keep your highest score.

3. Which of the following statements about Python is correct? 1 / 1 point

☐ A Python function can return only a single value.

☒ A function can take an unlimited number of arguments.

☐ Python does not support nested function.

☐ A Python function does not return unless you add a return statement.

Correct

A Python function could take unlimited arguments when you use **args.
