Learning Check - Task Environments

Instructions

Review Learning Objectives

1. True or false: An agent's choice of action at a given instant depends both on its percept sequence and future perceptual inputs.1 / 1 point

True

False

Correct

Assignment details

An agent's choice of action at a given instant is only based on its perception.

2. True or false: A task environment is fully observable, if a task agent's sensors can detect all of the aspects of the environment.1 / 1 point

True

False

Correct

Assignment details

A task environment is considered fully observable, if a task agent's sensors can detect all of the aspects of the environment that are relevant to the agent's choice of action

3. Which of the following statements are true? Select all that apply.1 / 1 point

☐ When something's behavior can be described as having its own performance measure, we can consider it a task environment.

☐ Poker and chess are examples of fully observable task environments.

☒ A stochastic environment can be fully observable.

Correct

True. Backgammon is an example because the board and the player moves are fully observable but there is randomness introduced by the dice throw.

☐ Chess is a continuous task environment because the moves will vary across games.
