3.5 Generalized Hough Transform Self-check Quiz

1 / 1 point

1. Given two squares having different orientations, when the ϕ -table is computed for both with reference point being the center of the square. Which of these parameters will have the same set of values in both tables?

☐ ϕ_1 and ϕ_2

☐ ϕ_1 and α_2

☒ ϕ_1 and α_1

☐ None of the Above

2. At the end of the lecture two new parameters were introduced: scale factor s and orientation factor θ . If we're the ϕ -table for a circle with the center, which of these 2 new parameters can be ignored when computing for the center?

☐ s

☒ θ

☐ All of the Above

☐ None of the Above

Your grade

To pass you need at least 80%. We keep your highest score.

Correct

A circle is symmetrical from directions hence it is invariant to orientation. Thus θ can be ignored.
