4.3 Learning Appearance Self-Check Quiz

1. Consider an object being placed on the turntable, and images of it being captured under all poses and lighting directions. Which of the following parameters change across the captured images?

1 / 3 point

Correct

Ready to review what you've learned before starting the assignment? I'm here to help.

☒ Illumination

☐ Reflectance

☐ Both A and B

☐ None of the above

Assignment details

Correct

Submitted

Attempts

As the object rotates, the lighting (illumination) changes. Reflectance is the intrinsic property of the object, so it remains the same irrespective of the way in which the image is captured.

2. Which of the following is a consequence of Dimensionality Reduction in most situations?

100%

1 / 3 point

Correct

Dimensionality reduction is the process of identifying and selecting the most important features from the given information, which inevitably leads to a loss of information from the discarded less important features. Of course, there might be some scenarios, such as <https://stan-ai-research.github.io/6698/>, where one of the original dimensions is a function of other dimensions. In such cases, we don't lose information even after reducing the dimension.
