☐ None of the above

100%

2. Which of the following is typically not a stage of the offline Appearance Learning pipeline? 1 / 1 point

☒ Smoothing each image

Like

Dislike

Report an issue

☐ Converting each image to a feature vector

☐ Subtracting the mean vector from each image vector

☐ Placing each vector in a matrix and computing the covariance matrix

Correct

In the first step of the pipeline, we normalize each image, instead of smoothing it, in order to remove the light variations.
