Coding Exercise

Write a function `variationMaker()` that takes in a file name like `image.png`. The functions should create 1 variation of the image in `512x512` and save it under a file name called `varTest.png`.

Feel free to test it out before submission. A try it button will be provided, additionally so will `varTest.png` file.

TRY IT!

Command was successfully executed.

Click here to refresh your variation image

When ready to submit please click the button below !

```
import os
import openai
import secret
import requests
openai.api_key=secret.api_key

def variationMaker(file):
    response = openai.Image.create_variation(
        image=open(file, "rb"),
        n=1,
        size="512x512"
    )
    image_url2= response['data'][0]['url']
    img_data = requests.get(image_url2).content
    with open('varTest.png', 'wb') as handler:
        handler.write(img_data)
```

Make sure that the variation image you try out has `512x512`.

Check It!
