Editing our Image

Now that we have our mask and original picture we can generate our edited picture. We are going to slightly modify our prompt to describe what we want generated.

response=openai.Image.create_edit(
 image=open("original.png", "rb"),
 mask=open("masked.png", "rb"),
 prompt="a vibrant modern office with red chairs and a television screen.a snack i
 n=1,
 size="512x512"
)
image_url = response['data'][0]['url']
#using the url, we use the code below to save it as a file
img_data = requests.get(image_url).content
with open('edited.png', 'wb') as handler:
 handler.write(img_data)

TRY IT!

Command was successfully executed.

Click here to refresh your mask image

We can also change the prompt to display other things such as:

response=openai.Image.create_edit(
 image=open("original.png", "rb"),
 mask=open("masked.png", "rb"),
 prompt="a vibrant modern office with red chairs and a television screen. A bagel
 n=1,
 size="512x512")

The mask parameter is optional. If not provided our image still needs to have transparency, which will be used as the mask. Feel free to move the box associated with your mask, in order to make different edits with your picture.

Which of the following statements is true regarding the mask parameter in the `create_edit` method of DALL-E's Images API?

☐

The mask parameter is required and must be provided in RGB format.

☐

The mask parameter is required and must be provided in RGBA format.

☒

The mask parameter is optional, but if not provided, the image should have transparency which will be used as the mask.

☐

The mask parameter is optional, and if not provided, the edit operation will not be performed.

The mask parameter is optional when using the `create_edit` method of DALL-E's Images API. If it is not provided, the image should have transparency (an alpha channel), which will be used as the mask for the edit operation.

Check It!
