

Learning Objectives

Learners will be able to...

- Understand the concept of image animation and how it can be applied to generated images.
- Learn how to create a sequence of images with varying properties using the DALL-E 2 API.
- Explore the use of the Python Imaging Library (PIL) to process and manipulate the sequence of images for animation purposes.
- Learn how to create a GIF (Graphics Interchange Format) animation using the sequence of generated images.
- Understand the importance of animation settings, such as frame duration and loop count, and how they can be adjusted to create a smoother and more visually appealing animation.

Make Sure You Know

You are familiar with Python.

Limitations

This is a gentle introduction. So there is a little bit of Python programming. The information might not be the most up to date as OpenAI releases new features.
