

Coding Exercise

Coding Exercise Requirement :

- Use the lowest in cost model
- Print only the string response

Drag and drop **ONLY** the necessary code in the box below. As this is python code, Please make sure to indent your code.

Drag from here

model="text-davinci-001"

model="text-babage-001"

model="text-curie-001"

print(response)

Construct your solution here

import openai

prompts = 'name the largest country'

response = openai.Completion.create(

model="text-ada-001"

, prompt=prompts)

print(response['choices'][0]['text'].strip())

The lowest cost model is `ada` and we have to use `print(response['choices'][0]['text'].strip())` in order to print and clean the message being generated.

Check It!

Mark as Completed
