OpenAI Tokens

OpenAI Tokens: A Quick Guide

OpenAI provides an innovative platform to build and deploy AI models. To ensure fair usage, OpenAI uses a system of tokens, which are consumed when using the API.

OpenAI Free Trial

OpenAI offers a free trial which includes a \$5 credit and lasts for 3 months. This trial is what our course design is based upon. During the trial, you get access to all OpenAI functionalities and the opportunity to understand how token usage affects your API calls.

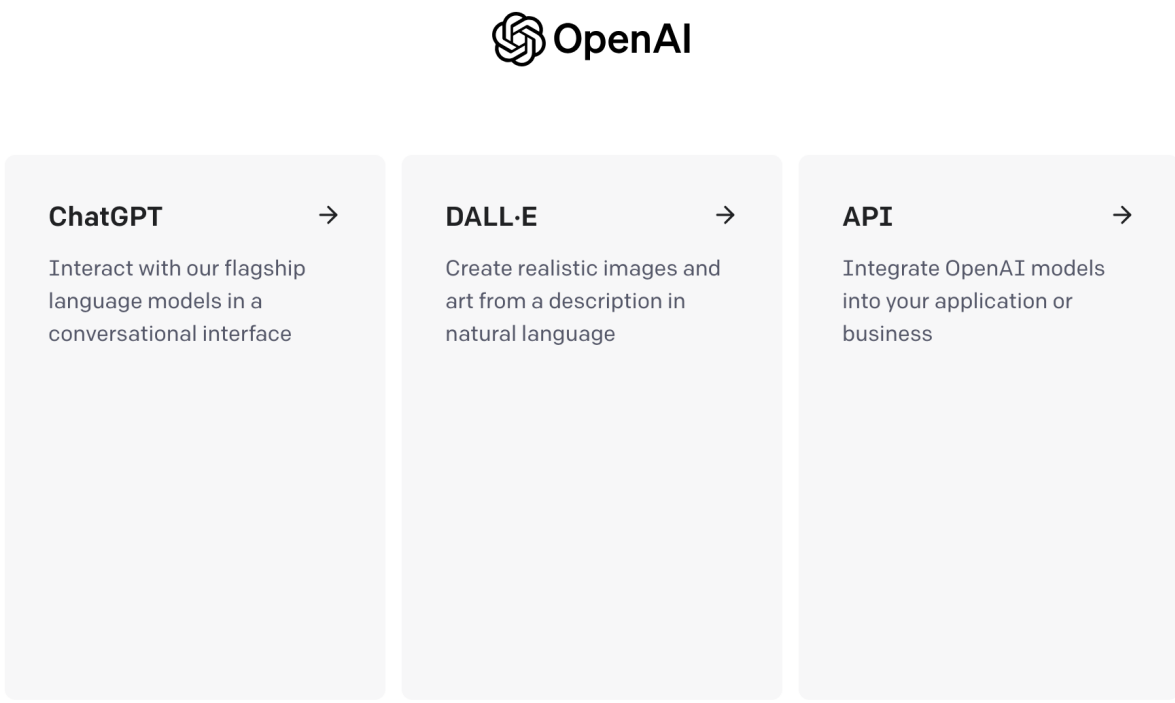

Token Usage in Coursework

Our coursework is structured to efficiently use the tokens allocated in the OpenAI free trial. We anticipated that you'd use approximately \$0.20 each for courses 1 and 3, and about \$1.50 for course 2, totaling to less than \$2. Therefore, you would still have over \$3 from the free trial to experiment and develop your own projects.

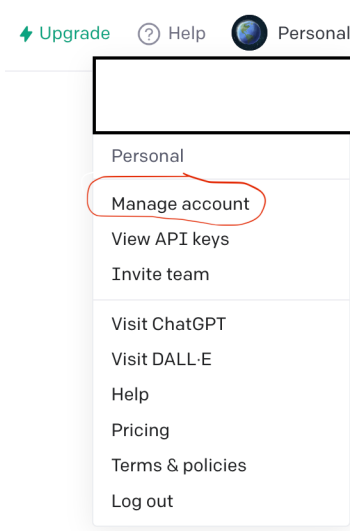

Steps to Add Extra Tokens

Once you exhaust your tokens, you may need to add extra tokens to continue with your coursework or personal projects. Here are the steps to do that:

1. Visit the OpenAI [website](#)  and log in to your account. Click on API

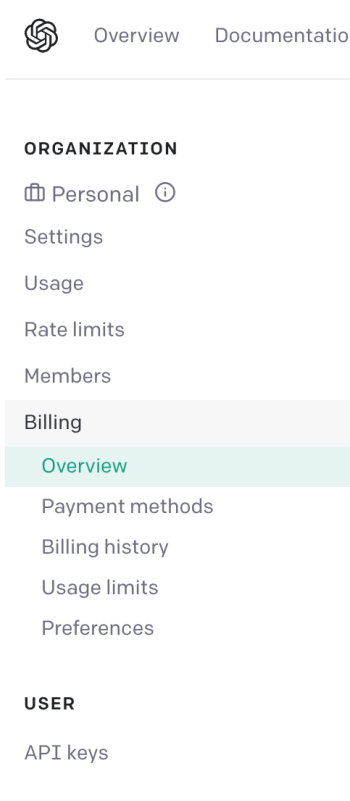

2. Navigate to your account dashboard on the top left, typically found under your profile.

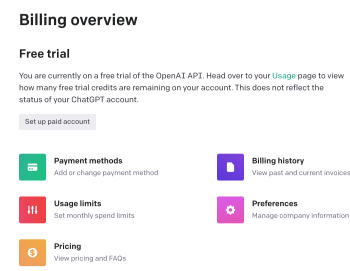

3. Click on Manage account

4. From there click on Billing

4. Ideally , you should see the following images at this point stating the free trial is active.

5. if not follow the prompts to purchase additional tokens. Ensure you read and understand the terms, including costs associated with extra tokens.

Remember, the management of tokens is a crucial part of working with AI applications. It helps to balance your needs with the resources available, ensuring an efficient and cost-effective AI model development process.
