CollapseIntro to GPT-3

Temperature

```
prompts ="Write a tagline for an ice cream shop"
temperature=0) ## added

print(response['choices'][0]['text'].strip())
```

Try running the code a few times by clicking the button below multiple times.

TRY IT!

You probably got the same output each time. When `temperature` is set to 0 it is referred to as **argmax sampling**, meaning the option with the highest probability is always selected. The option with the highest probability will perceive as the most “correct” answer. Higher temperatures will generate a more diverse response.

Try these variations:

- Try running the code multiple times when you set `temperature` to `0.5`:

```
response = openai.Completion.create(model="text-davinci-002",
                                    prompt=prompts,
                                    temperature=0.5)
```

TRY IT!

- Try running the code multiple times when you set `temperature` to `1.7`:

```
response = openai.Completion.create(model="text-davinci-002",
                                    prompt=prompts,
                                    temperature=1.7)
```

TRY IT!

100% (2:1)

```
prompts ="Write a tagline for an ice cream shop"

print('Temperature 0.2:')
print('-----')
for i in range(3):
    response = openai.Completion.create(model="text-davinci-002",
                                        prompt=prompts,
                                        temperature=0.2)

    print(response["choices"][0]["text"].strip())

print('\n\nTemperature 0.8:')
print('-----')

for i in range(3):
    response = openai.Completion.create(model="text-davinci-002",
                                        prompt=prompts,
                                        temperature=0.8)

    print(response["choices"][0]["text"].strip())
```

TRY IT!

You can try running the above a few times but note that it is asking for 6 generations for each run so it will consume tokens quickly.

Here is an example of the output:

```
Temperature 0.2:
-----
The best ice cream in town!
The best ice cream in town!
The best ice cream in town!

Temperature 0.8:
-----
The best ice cream in town!
The best ice cream in town!
The best ice cream in town!
```
