

This tool lets you try out different settings (engines, temp, top p, etc.) and compare the results.

1. Add your API key here (this will not be stored remotely.)

API key

2. Click on "Add a new panel prompt" to add a prompt box. You can create as many prompt panels as you like to experiment with engines, temperature, top_p and prompts.

3. Click "Save data" to add the results to a .xlsx file that you can download. Input, outputs and your settings will be saved. You can remove panels by click on "Remove".

Note: Closing this window will lose all data
