2. A Permutation Cipher has a key length of 5, e.g., one key can be [2 2 1 4 5]. How many possible keys are there?

4 / 4 points

120

LikeDislikeReport an issue

Correct

See Permutation Cipher lecture.

3. The plaintext MEETMELATER gets processed by a Permutation Cipher (with a key of [2 3 5 4 1] and no padding with extra letters. What is the corresponding ciphertext?

4 / 4 points

MEMERELITTEA

Correct

See Permutation Cipher lecture.

4. The plaintext MEETMELATER gets processed by a Permutation Cipher (with a key of [2 3 5 4 1] and with padding using the letter "z" (Alice and Bob agree to use the letter z for padding). What is the corresponding ciphertext?

4 / 4 points

MEZMERELZTTZEAZ

Correct

See Permutation Cipher lecture.
