1. For this practice quiz, you will execute the Coursera Labs Jupyter notebook code for this lesson and enter some computed results.

1 / 1 point

Execute the code as is. What is the rms error for the **position** state? Enter your answer with four digits to the right of the decimal point. Note that the code is originally configured to compute the rms error for all the states (position and velocity) so you will need to make minor modifications to compute the desired result.

0.0031

✔ Correct

Yes. That is correct.

2. What is the maximum absolute estimation error for the **velocity** state? Enter your answer with three digits to the right of the decimal point.

1 / 1 point

0.088

✔ Correct

Yes. That is correct.

3. What is the percentage of time that the **position** estimate is outside of its estimation confidence bounds? Enter your answer with one digit to the right of the decimal point.

1 / 1 point

0.9

✔ Correct

Yes, that is correct.
