1. Execute the Coursera Lab Jupyter notebook for this lesson, which implements both the EKF and IEKF for a very challenging model.

1 / 1 point

Which estimator produces lower root-mean-squared errors (RMSE) and which produces more reliable confidence bounds?

- ☐ The EKF produces lower RMSE and more reliable confidence bounds.
- ☐ The EKF produces lower RMSE and the IEKF produces more reliable confidence bounds.
- ☒ The IEKF produces lower RMSE and more reliable confidence bounds.
- ☐ The IEKF produces lower RMSE and the EKF produces more reliable confidence bounds.

✔ Correct
Yes, this is correct.

2. Execute the Coursera Lab Jupyter notebook for this lesson, which implements both the EKF and IEKF for a very challenging model.

1 / 1 point

What is the percentage of time that the state estimate is outside of the estimation error bounds for the EKF? Enter your answer with one digit to the right of the decimal point.

45

✔ Correct
Yes, that is correct.

3. Execute the Coursera Lab Jupyter notebook for this lesson, which implements both the EKF and IEKF for a very challenging model.

1 / 1 point

What is the percentage of time that the state estimate is outside of the estimation error bounds for the IEKF? Enter your answer with one digit to the right of the decimal point.

21

✔ Correct
Yes, that is correct.
