Your latest: **100%** • Your highest: **100%** • To pass you need at least 80%. We keep your highest score.

1. Execute the Coursera Labs Jupyter notebook for this lesson. You may wish to set the `showPlot` variable to zero to speed up the simulation (this will not change the result computed by the code; it will only cause the code not to plot the scatter plot).

1 / 1 point

If you set the number of base stations to 1, what is the root-mean-squared position error computed by the particle filter? Enter your answer with two digits to the right of the decimal point.

2.46

 **Correct**

Yes, that is correct.

2. For the same Coursera Labs Jupyter notebook, set the number of base stations to 2. Now, what is the root-mean-squared position error computed by the particle filter? Enter your answer with two digits to the right of the decimal point.

1 / 1 point

0.16

 **Correct**

Yes, that is correct.

3. For the same Coursera Labs Jupyter notebook, set the number of base stations to 3. Now, what is the root-mean-squared position error computed by the particle filter? Enter your answer with two digits to the right of the decimal point.

1 / 1 point

0.16

 **Correct**

Yes, that is correct.
