Mechanistic Interpretability TransformerLens Library

Complete ▾

If you want to try out some Mechanistic Interpretability methods for yourself, there is a python library called TransformerLens created by Neel Nanda. This requires a GPU to run, so we will not be including programming assignments or demos. However, if you have access to a GPU or Google Colab, I highly encourage you to go through this tutorial from TransformerLens.

Even if you do not have access to a GPU, you can open the link and review the outputs. Please do this prior to the Discussion.
