

Essential reading: Engage directly with our Jupyter and ChatGPT labs

To make the most of this learning experience, we encourage you to actively participate by coding along with our instructor. For this purpose, we've prepared Jupyter Lab environments and ChatGPT labs where you can practice and apply what you're learning in real-time.

These labs are designed to complement the course material, allowing you to experiment with the code and understand the concepts more deeply. By trying out the examples and exercises, you'll get a hands-on understanding of how things work, which is crucial for learning effectively. It's not just about following along; it's about engaging with the content, making mistakes, and finding solutions.

We believe that by using these labs, you'll be able to bridge the gap between theoretical knowledge and practical skills. So, as you progress through the course, take advantage of these resources. They are here to help you learn, understand, and master the concepts of Generative AI in software development. Let's start this journey together, with all the tools you need to succeed.
