1. Which of the following is NOT a task required for computations in Bayesian Analysis? 1 / 1 point

- Loops
- Scatterplots
- Computing probability density functions
- Object-oriented programming

Correct
Correct! Object-oriented programming is not required for Bayesian data analysis, although it is possible to use it.

2. What was the purpose of the `sample` function in the R code from class? 1 / 1 point

- To compile the Stan model.
- To summarize and print the results.
- To generate synthetic data.
- To fit the model and draw samples from the posterior distribution.

Correct
Correct! The `sampling` function fits the model and draws samples from the posterior distribution.
