

Practical Applications and Computational Challenges Readings

For this lesson, read the following:

- Inference from Iterative Simulation Using Multiple Sequences (1992) by Gelman and Rubin – A research article discussing Schizophrenia example explored in the [textbook](#)
- [Section 22.2](#) : Example: Reaction Times and Schizophrenia
- [Section 22.3](#) : Label Switching and Posterior Computation
- [Section 22.4](#) : Unspecified Number of Mixture Components

You may download the PowerPoint used in this lesson's video lecture here:
