6. Assessing Convergence

MCMC

Module 2 assignments and materials

Assignments

This module has three required quizzes and an honors quiz. A score of 75% is required to pass (80% for the honors quiz). Quizzes can be attempted up to four times in an eight-hour period.

Additional Materials

In addition to regular lectures and quizzes, this module includes the following materials.

Lesson 4: Metropolis-Hastings

- Code: This document contains the development for the screen-recording lectures, including the code used in the examples.

JAGS

- Alternative MCMC software: This optional reading describes alternative MCMC software options.
- Code: This document contains the development for the screen-recording lectures, including the code used in the examples.

Lesson 5: Gibbs Sampling

- Code: This document contains the development for the screen recording lectures, including the code used in the examples.

Lesson 6: Assessing Convergence

- Autocorrelation: This optional reading introduces covariance, correlation, and autocorrelation. Assessing autocorrelation is an important component of MCMC convergence diagnostics.
- Code: This document contains the development for the screen recording lectures, including the code used in the examples.
