Welcome to the Games Without Chance: Combinatorial Game Theory course. This course explores the mathematical theory of two player games without chance moves. We will cover simplifying games, determining when games are equivalent to numbers, and impartial games. Many of the examples will be with simple games that may be new to you: Hackenbush, Nim, Push, Toads and Frogs, and others. While this probably won't make you a better chess or go player, the course will give you a better insight into the structure of games.

This course consists of 7 weeks. You should spend about 1-3 hours a week on watching video lectures and completing quizzes. The expectation is for you to keep pace with the course as this course is collaborative in nature and you are expected to interact with your classmates. You can click on each week on the left to access content and take part in collaborative activities for that week. The syllabus can also be located to the left and will explain the logistics of the course, such as how grading will be done and a week by week course outline of what we will cover. From here you should:

- Read the syllabus, located on the Syllabus tab to the left
- You can find each weeks material on that weeks tab located to the left (ie. go to the Week 1 tab to see the material for the first week).
- Video Lectures can be found in the Video Lectures tab to the left. Links are also provided in the different Week tabs.
- Links to download each weeks Quiz is the Week tab for that week. Please download the questions, work out the problems, and submit your solutions by filling out the quiz for that week in the Quizzes tab located to the left. Remember, there are only quizzes for weeks 2 through 6.
- After each quiz deadline, we will release a detailed solution guide so you can check your answers and see how we did the problems. Please look through these so you can see where you made a mistake.
- Please ask questions in the Q&A Forum tab and feel free to discuss problems amongst yourselves in the Discussion Forums tab. We will try to answer as many questions as we can, but due to the size of this class we will not be able to answer all of them.
- If you forget the rules to a game, or need to check on a basic value of a game, go to the Game Rules tab on the left.

It is always a good policy to understand how an online class is different from a face-to-face class. Hence it is imperative that you review your role and the expectations of an online class at <http://onlinelearning.gatech.edu>
