Nonparametric Methods for Smoothing Nonlinear data

Submitted on August 22, 2024

PROMPT	RUBRIC
Submit the write up from your Module 2 Peer-Review Lab here. Nonparametric Methods for Smoothing Nonlinear data <u>Nonparametric Methods for Smoothing Nonlinear data</u> Nonparametric Methods for Smoothing Nonlinear data	Use the provided notebook to check the student's answers. Be aware that some questions may involve randomness or simulation, and thus will have different values than the ones in the solution. C3M3_peer_review_v2 - Solutions HTML File Did the student submit either a .html, .pdf, or .doc/.docx filetype? ☐ 0 points No ☒ 5 points Yes 1.(a) Did the student correctly plot the variables; fit and overlay a kernel regression; choose the appropriate bandwidth parameter; and provide an appropriate justification? ☐ 0 points No answer ☐ 3 points Moderate or major mistakes were made on two or more components of the problem. ☐ 6 points Moderate mistakes were made with one component of the problem or minor mistakes were made on two or more components of the problem. ☐ 8 points Minor mistakes were made with one component of the problem. ☒ 10 points The student correctly plotted the variables; fit and overlay a kernel regression; chose the appropriate bandwidth parameter; and provide an appropriate justification. 1.(b) Did the student correctly plot the variables; fit and overlay a smoothing spline regression; choose the appropriate bandwidth parameter; and provide an appropriate justification? ☐ 0 points No answer ☐ 3 points Moderate or major mistakes were made on two or more components of the problem. ☐ 6 points Moderate mistakes were made with one component of the problem or minor mistakes were made on two or more components of the problem. ☐ 8 points Minor mistakes were made with one component of the problem. ☒ 10 points The student correctly plotted the variables; fit and overlay a smoothing spline regression; chose the appropriate bandwidth parameter; and provide an appropriate justification. 1.(c) Did the student correctly plot the variables; fit and overlay a loess regression; choose the appropriate bandwidth parameter; and provide an appropriate justification? ☐ 0 points No answer ☐ 3 points Moderate or major mistakes were made on two or more components of the problem. ☐ 6 points Moderate mistakes were made with one component of the problem or minor mistakes were made on two or more components of the problem. ☐ 8 points Minor mistakes were made with one component of the problem. ☒ 10 points The student correctly plotted the variables; fit and overlay a loess regression; chose the appropriate bandwidth parameter; and provide an appropriate justification. 1.(d) Did the student correctly calculate the MSPE for kernel regression, smoothing spline regression, and loess model, and identify which model is best in terms of this metric? ☐ 0 points No answer ☐ 4 points The student incorrectly calculated the MSPE for all of the models. ☐ 8 points The student incorrectly calculated the MSPE for two of the models, but identified the "best" model consistent with calculations. ☐ 12 points The student incorrectly calculated the MSPE for one of the models, but identified the "best" model consistent with calculations. ☒ 15 points The student correctly calculated the MSPE for kernel regression, smoothing spline regression, and loess model, and identified which model is best in terms of this metric. 2. Did the student correctly simulate data and complete all of the steps of 1a-d? ☐ 0 points No answer ☐ 5 points The student correctly simulated data but made 4+ moderate (or worse) mistakes. ☐ 10 points The student correctly simulated data but made 3-4 minor/moderate mistakes. ☐ 15 points The student correctly simulated data but made 1-2 minor mistakes. ☒ 20 points The student correctly simulated data and completed all of the steps of 1a-d.
