

About the Course

- ## Generative AI Landscape

Overview of Course Structure

Each week, you will do the following:

1. Engage with content through **videos** and **reading** materials.
2. Complete hands-on exercises **in a mix of Coursera Labs, Local (your device) lab, and GitHub Codespace Labs**. These practice exercises are ungraded and will give you the opportunity to practice some of the concepts and skills that you acquire in each lesson. Labs covering individual components or sub-topics for the week's lesson will be scattered throughout the week's material. A Lab at the end of the week will give you a chance to put it all together.
3. You will be ready to take **a graded quiz** at the end of each week. This quiz is comprised of 10 multiple-choice questions focused on concepts from all of the videos, readings, and practice labs. You must receive an **80%** on this quiz to move to the next week's worth of material. You can take this quiz as many times as you like.
4. Throughout each lesson, you will see examples of how your instructors have used GitHub to share projects both for you in this course and also professionally in their data engineering careers. Though *optional*, you are encouraged to share a **GitHub repository** of any ways that you have integrated what you've learned in these lessons to solve real-world problems relevant to your professional life. You can share your repo using the Discussion Forum in this course and/or through Social Media using the hashtag: #duke-gen-ai.

Discussion Etiquette

While this course is designed for you to move at your own pace, there are numerous opportunities to collaborate and discuss with your fellow classmates in both the Course Discussion Forum and using the Social Media hashtag (#duke-gen-ai). These platforms for communication are entirely optional but recommended to build connections with other people interested in learning Generative AI. As a reminder when contributing to online discussion in this platform and beyond:

- **Keep it civil.** Debating ideas and disagreeing is a natural part of working with others. Remember to be respectful even in times of disagreement. Using all caps can be considered shouting. If someone posts something inappropriate, please use the 'report' button in Coursera to inform a moderator.
- **Contribute thoughtfully.** Read everything in the discussion thread before replying. This will help you fully digest the discussion and avoid repeating what someone else has already contributed.
- **Help others.** You may have more experience in data engineering and/or online discussion platforms than others. This is a shared learning environment where we all benefit from each other's successes. When appropriate, friendly feedback to your classmates is usually appreciated.
