History of artificial Intelligence

In this reading from Wikipedia's page on the History of Artificial Intelligence [↗](#), you will gain additional details about the past of AI and some other facts and events that lead us to where we are today in AI.

Reflection and critical thinking questions

1. How has the definition and goals of AI research evolved over time? What were some of the early optimistic predictions about AI, and why were many not achieved in the projected timeframes?
2. What were some of the major challenges and setbacks for AI research over the decades, leading to "AI winters"? How did researchers work to overcome some of these challenges?
3. What breakthroughs and developments ultimately enabled progress for AI in recent decades? How did increases in data and compute power facilitate achievements in deep learning and neural networks?
