Understanding Large Language Models

[In this reading from the Microsoft Learn Module on "Introduction to Large Language Models"](#) , you will gain insights on aspects of LLMs and how they work.

Although the content is short, it will give you a good starting point on Large Language Models for this lesson.

Reflection questions

1. What enables LLMs to process and generate natural language text? How have increases in compute power and data facilitated the growth in size and capabilities of LLMs over time?
2. How do foundation models like GPT-3 and Codex fit into the broader category of LLMs? What is the training process that creates these foundation models?
3. What are some key differences between traditional NLP systems and modern LLMs? How do concepts like few-shot learning allow LLMs like GPT-3 to perform a wider range of natural language tasks?
