Practice Assignment: Review Questions 30 min

Using OpenAI to Summarize Videos

AI Business Environment, Ethics, and Safety

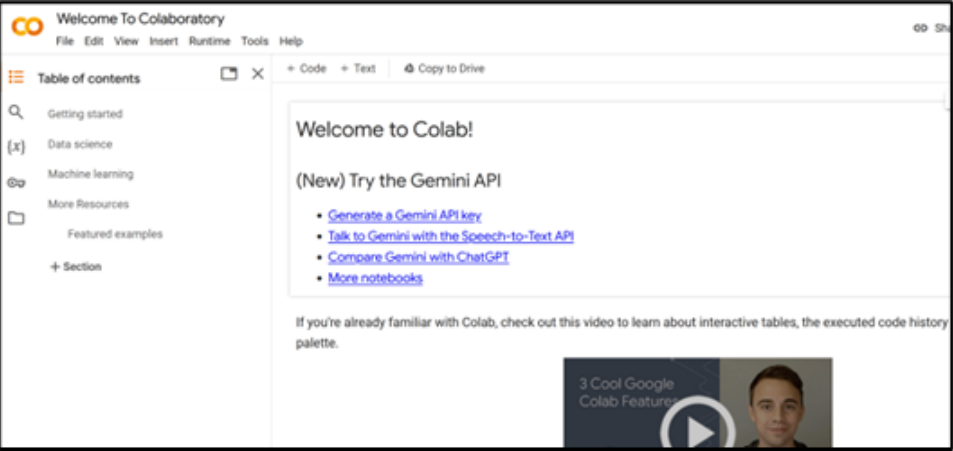

Course Summary

External Lab: Fine Tuning w/GPUs

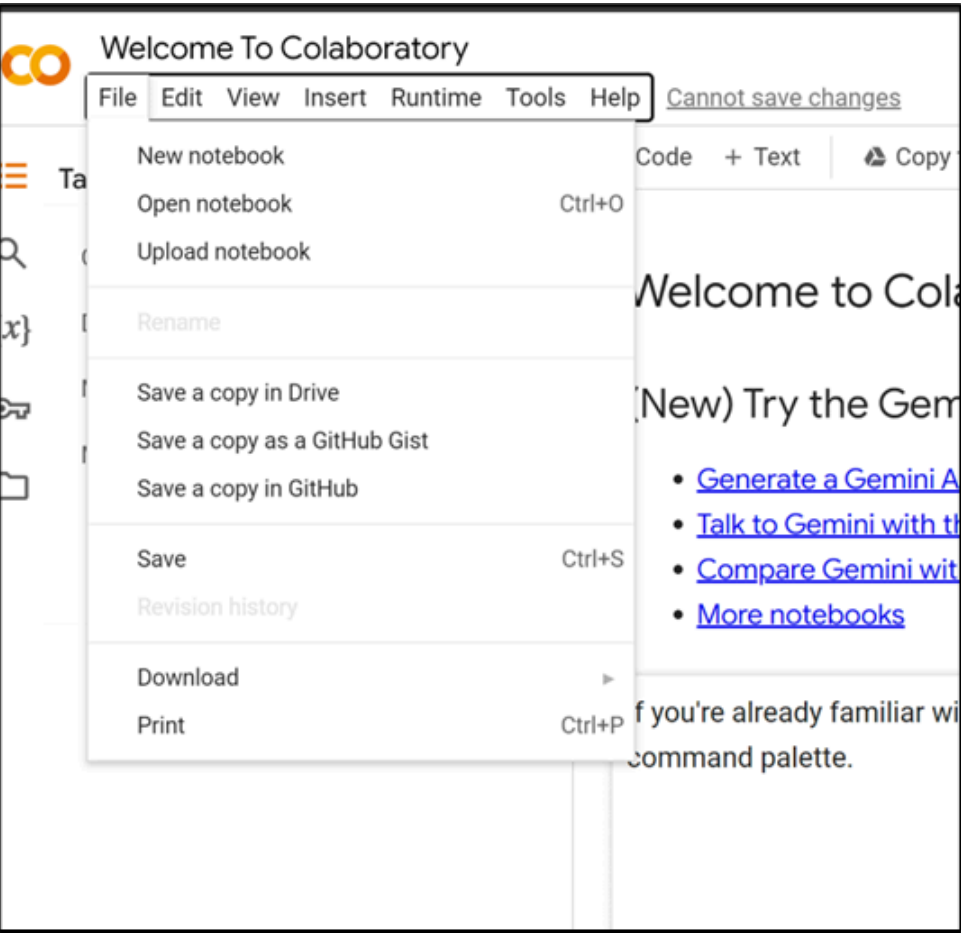

In the previous guided example we went through the basics of fine tuning on a small dataset. Here we will go through the steps of setting up an environment to do the same thing using powerful GPUs (available for \$10/month with Google Colab).

Steps

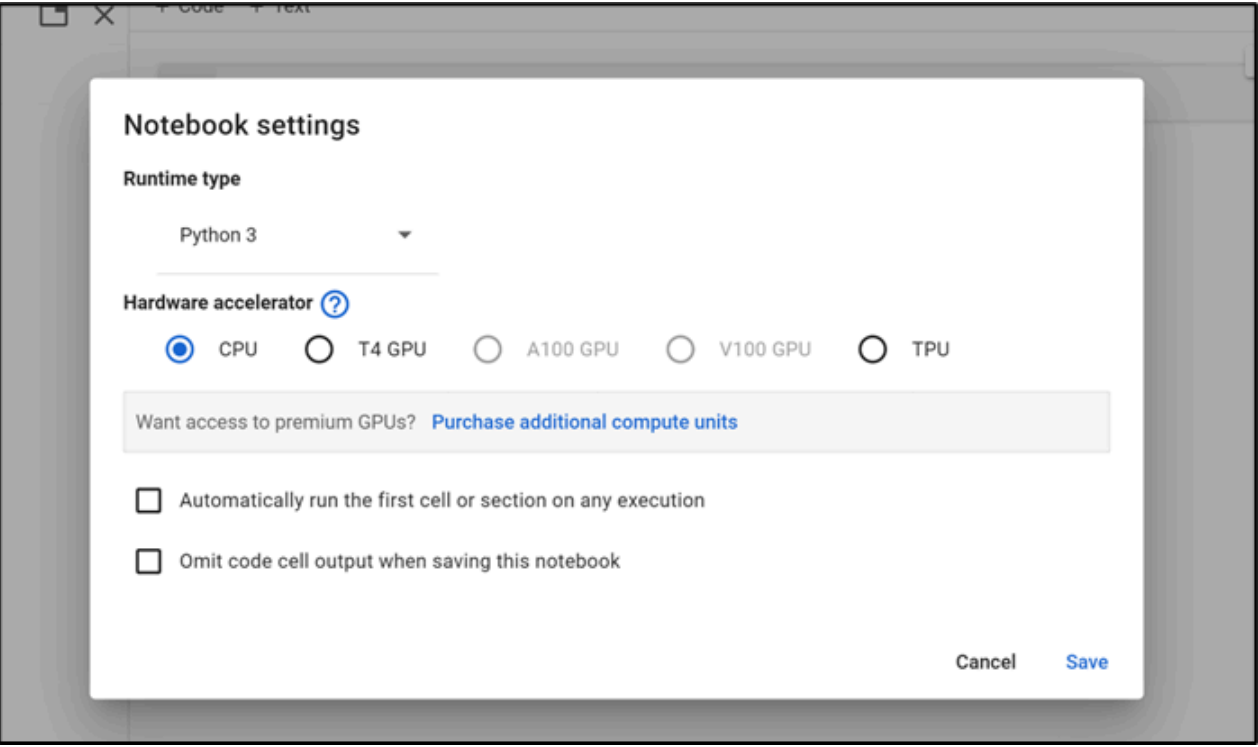

- Go to Colaboratory([google.com](https://colab.research.google.com)) and sign up using your Google Account

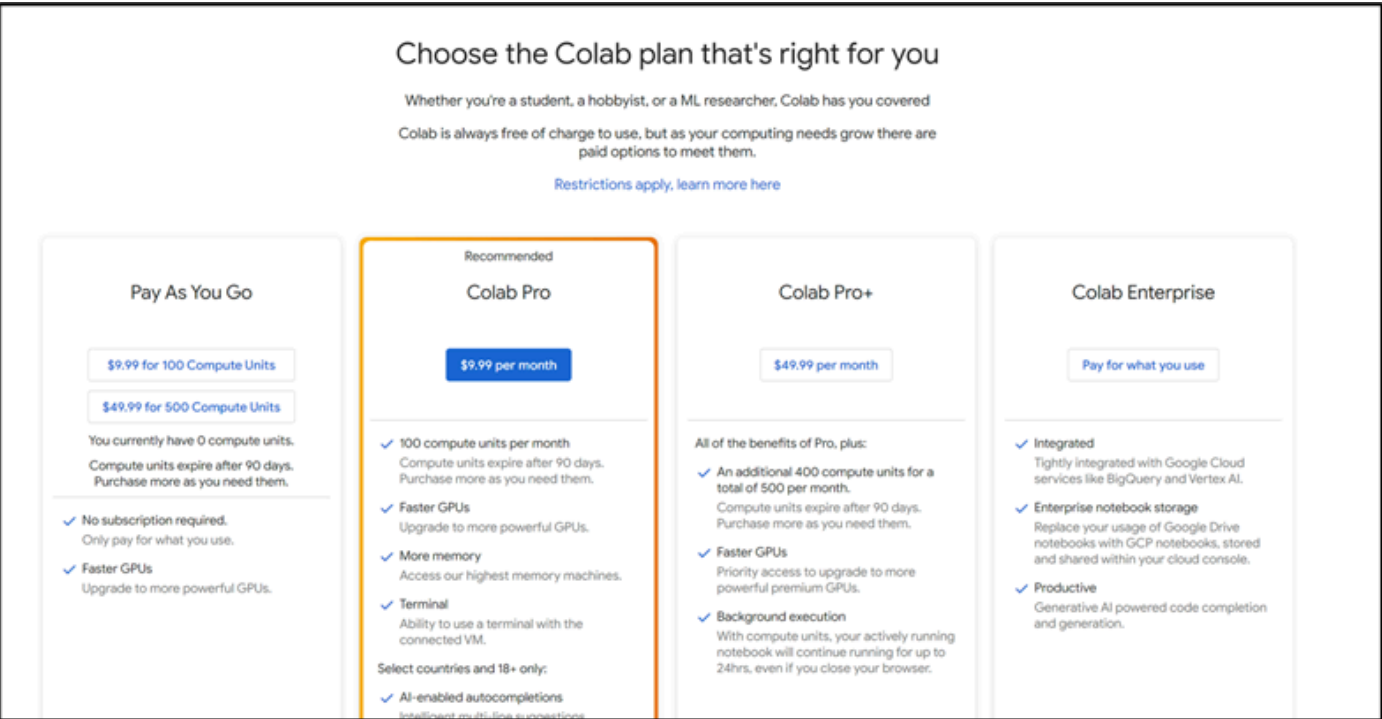

- Click file and select New Notebook

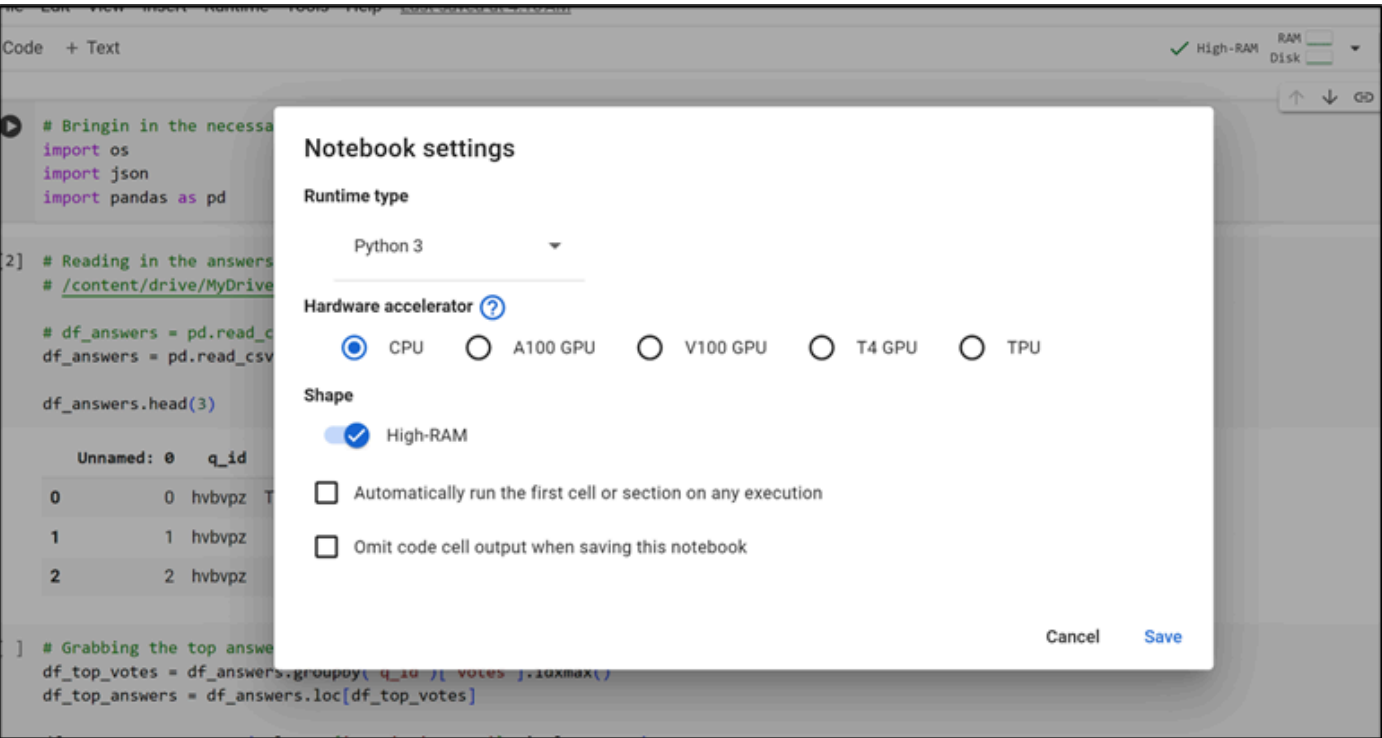

- On the New Notebook Screen edit and Notebook Settings and select "Purchase Additional Compute Units"

- Select Colab Pro, which provides GPUs for \$10/month

- Back in the Notebook, select edit, Notebook setting and connect to a GPU of your choosing

- Code!
