

# Access MATLAB and Course Files

## Download MATLAB

Follow the steps below to install MATLAB and get started. Even if you already have MATLAB, we recommend using the free license as this course will use new functionality that may not be present in older versions.

1. If you do not already have a MathWorks account, create one here: <https://www.mathworks.com/mwaccount/register> . Be sure to verify your email before moving on to step 2 (check your Junk/Spam folders).
2. [Click here to go to the license page](#)  for this course and download the installer.
3. Run the installer using the default options. If you run into trouble, post the steps you took and the error message you received in the forums. A screenshot is often helpful.

## Download the Course Files

Follow the instructions below to get the files necessary to complete quizzes and readings. You will be referred to these files as needed throughout the specialization.

1. [Download the zip-file](#)  containing the code and data files for the course.
  - Choose a location on your computer to save all work related to this course and unzip the file. For example, create a folder named "Coursera" and unzip the code files to that location.
  - After this step, you should have a folder named "Medical Image Processing" with the following folders:

### Name

 Data Module 1 Module 2 Module 3

### 2. Open MATLAB

3. **Navigate the Current Folder** so that you see "Medical Image Processing" (see screen shot below)

4. **Right click on the folder** and select "Add to Path" -> "Selected Folders and Subfolders"
