

Note for the Next Video

In the next video, you will learn how to use pre-trained deep learning model to automatically label organs in a CT scan. This video is for informational purposes and you do not need to perform any automated labeling yourself to pass the course. To follow along, you need the data and a supported GPU. Also, the MONAI support package is only supported on Windows and Linux operating systems.

To download the CT data, refer to [this example from the MathWorks documentation](#) . Make a note of where the files are saved when downloading them.

For more information on using a GPU with MATLAB refer to the following documentation pages:

- [Use a local GPU](#)  on your personal computer
- [Use a public cloud](#)  like AWS or Microsoft Azure
