Your latest: 82% • Your highest: 88% • To pass you need at least 80%. We keep your highest score.

1.

Which of the following are necessary steps in building an ML model for ticket classification?

1 / 1 point
- ☒ Saving the model for future use

✔ Correct

Correct! Saving the trained model allows it to be used for future predictions.

☐ Using raw data without modifications

✔ Correct

Correct! Model training involves feeding preprocessed data into the machine learning algorithm to build the model.

☒ Model training

✔ Correct

Correct! Model training involves feeding preprocessed data into the machine learning algorithm to build the model.

☒ Data preprocessing

✔ Correct

Correct! Data preprocessing is essential for cleaning and preparing the data for modeling.

☐ Ignoring missing values

2.

What functionalities are essential for the UI of a chatbot to interact effectively with users?

0.5 / 1 point

☐ Managing database schema

☒ Displaying error logs

✘ This should not be selected

Incorrect. While displaying error logs can be useful for debugging, it is not an essential functionality for user interaction.

☐ Uploading files

☒ Capturing user input

✔ Correct

Correct! Capturing user input is crucial for any chatbot to function effectively.

☒ Providing real-time responses

✔ Correct

Correct! Real-time responses make the interaction seamless and user-friendly.

☐ Routing queries to appropriate departments

3.

Which steps are involved in establishing a connection with Pinecone and retrieving relevant documents based on user input?

0.6 / 1 point

☒ Converting text data to numerical representation.

✘ This should not be selected

Incorrect. While important, converting text data to numerical form is a separate step before connecting to Pinecone.

☐ Indexing documents in Pinecone.

☒ Setting up Pinecone client with API keys.

✔ Correct

Correct! Setting up the Pinecone client with appropriate API keys is the first step.

☒ Sending queries to Pinecone for document search.

✔ Correct

Correct! Sending queries to Pinecone is necessary to fetch relevant documents based on user input.

☐ Creating user authentication mechanisms.

4.

What is the primary purpose of using OpenAI in the HR resume screening assistance tool?

1 / 1 point

☒ To analyze and shortlist resumes based on job descriptions.

☐ To populate a documents list with metadata.

☐ To create a unique ID for user-uploaded documents.

☐ To establish connections with Pinecone for document retrieval.

✔ Correct

Correct! OpenAI can help analyze resumes and match them against job descriptions to streamline the screening process.

5.

How can you access the Llama two model?

1 / 1 point

☒ Through cloud APIs

✔ Correct

Correct. Cloud APIs are one of the main ways to access the Llama two model.

☐ Via a dedicated mobile app only

☒ Using on-premises setups

✔ Correct

Correct. On-premises setups are a viable option for accessing the Llama two model.

☒ With pre-trained models available for customization

✔ Correct

Correct. Pre-trained models that can be customized are one of the ways to use the Llama two model.

☐ Only through command-line interfaces
