1. What is the primary purpose of creating the app.py file in a chatbot application?

1 / 1 point

- ☐

To manage the database connections and schema
- ☐

To deploy the application to a cloud service
- ☒

To handle the UI and backend, capture user input, and perform actions based on it
- ☐

To perform data preprocessing and model training
- ☒

Correct

Correct! The app.py file is crucial for integrating the UI and backend, capturing user input, and executing the necessary actions.

2. How can the chatbot interact with a vector store to provide well-crafted responses?

1 / 1 point

- ☐

By manually coding responses for each possible query
- ☒

By retrieving relevant data embeddings from the vector store
- ☐

By storing user inputs in a session variable
- ☐

By calling external APIs for real-time data
- ☒

Correct

Correct! Utilizing data embeddings from the vector store allows the chatbot to generate accurate and contextually relevant responses.

3. Which of the following tasks are necessary to set up the folder structure for the HR resume screening assistance tool?

0.4 / 1 point

- ☒

Implementing the frontend user interface.
- ☒

This should not be selected

Incorrect. Implementing the frontend is a separate task that comes after setting up the folder structure.
- ☐

Connecting to the Pinecone database.
- ☐

Creating directories for different components.
- ☒

Creating a unique ID for user-uploaded documents.
- ☒

This should not be selected

Incorrect. Creating a unique ID is part of the frontend implementation, not the initial folder structure setup.
- ☒

Adding necessary Python files with required functions.
- ☒

Correct

Correct! Adding necessary files and functions is essential for the tool's functionality.

4. What is the significance of converting text data to numerical representation in the context of HR resume screening?

1 / 1 point

- ☐

It helps in creating unique IDs for each resume.
- ☐

It simplifies the process of adding metadata to resumes.
- ☒

It enables the analysis of resumes using machine learning algorithms.
- ☐

It assists in connecting to the Pinecone database.
- ☒

Correct

Correct! Converting text data to numerical representation allows machine learning models to analyze the resumes effectively.

5. Which of the following best describes the Llama two model's flexibility in deployment?

1 / 1 point

- ☐

It is restricted to on-premises use only.
- ☐

It can only be used with open-source platforms.
- ☒

It can be deployed both on the cloud and on-premises.
- ☐

It is limited to academic research purposes only.
- ☒

Correct

Correct! The Llama two model offers flexibility in deployment, supporting both cloud and on-premises solutions.
