Your latest: **100%** • Your highest: **100%** • To pass you need at least 80%. We keep your highest score.

1. Which tasks can be performed using a Large Language Model (LLM) in natural language processing?

1 / 1 point

☒ Text generation

 **Correct**
Correct. LLMs are capable of generating human-like text based on given prompts.

☒ Sentiment analysis

 **Correct**
Correct. LLMs can analyze the sentiment of a given text.

☐ Speech recognition

☐ Image classification

☒ SQL query generation

 **Correct**
Right. LLMs can generate SQL queries from natural language descriptions.

☐ Object detection

2. What is the primary purpose of using a Hugging Face pipeline in a deep learning project?

1 / 1 point

☐ To visualize neural network architectures

☐ To enhance the performance of GPUs

☒ To streamline the process of implementing machine learning models

☐ To manage large datasets efficiently

 **Correct**
Correct! The Hugging Face pipeline is designed to make it easier to implement machine learning models by providing a simple API for various tasks.

3. Which of the following are essential steps in setting up automated summarization of customer care call recordings?

1 / 1 point

☒ Generating summaries based on sentiment analysis

 **Correct**
Correct! Sentiment analysis helps in creating meaningful summaries of the calls.

☐ Sending summaries via postal mail

☒ Importing the whisper library

 **Correct**
Correct! Importing the whisper library is necessary for handling audio transcription.

☐ Manual transcription of recordings

☒ Uploading call recordings to the server

 **Correct**
Correct! You need to upload the call recordings for processing.

4. Identify potential applications of call summarization tools in creating better user experiences and automating tasks.

1 / 1 point

☐ Enhancing the audio quality of the recordings

☐ Generating real-time transcription during calls

☒ Reducing manual workload for customer service agents

 **Correct**
Correct! Automating call summarization reduces the manual effort required from customer service agents.

☒ Automating quality assurance processes

 **Correct**
Correct! Summarization tools can help automate quality assurance by analyzing call contents.

☒ Providing quick summaries of customer interactions

 **Correct**
Correct! Summaries of customer interactions can enhance user experience by providing quick insights.

5. What is the first step in transcribing audio files using the methods discussed in the lesson?

1 / 1 point

☒ Importing the whisper library

☐ Setting up the app.py file

☐ Sending emails via Zapier

☐ Uploading the audio files to the server

 **Correct**
Correct! Importing the whisper library is the first step in transcribing audio files.
