

New issue

[Feature]: Replicate model - get most recent version if none passed in #433

Closed

What happened?

When i passed in

```
response = completion(
    model="replicate/meta/llama-2-70b-chat", messages=messages, stream=True, max_tokens=50
)
```

I was just expecting it to work
It seems like I need to also pass in a version id:
meta/llama-2-70b-chat:02e509c789964a7ea8736978a43525956ef40397be9033abf9fd2badfe68c9e3
But if none passed in, just grab the most recent one.

Relevant log output

```
Traceback (most recent call last):
  File "/Users/krishdholakia/Documents/litellm/litellm/tests/test_streaming.py", line 363, in <module>
    test_completion_replicate_stream()
  File "/Users/krishdholakia/Documents/litellm/litellm/tests/test_streaming.py", line 362, in test_completion_replicate_stream
    pytest.fail(f"Error occurred: {e}")
```

I have the same problem, don't know what the solution is!

Replicate actually expects you to pass in the model id:
~~Then, run the model.~~

```
import Replicate from "replicate";

const replicate = new Replicate({
  auth: process.env.REPLICATE_API_TOKEN,
});

const output = await replicate.run(
  "meta/llama-2-70b-chat:02e509c789964a7ea8736978a43525956ef40397be9033abf9fd2badfe68c9e3",
  {
    input: {
      prompt: "..."
    }
  }
);
```

You can specify a webhook URL to be called when the prediction is complete. Take a look at the [webhook docs](#) for details on setting that up.

So go to the api tab of the model and copy the full name. Yea i think it would be simpler to just get the model id

Ah no, I had the same error but the reason was slightly different. I was passing in all the correct info that is the full model name etc but it still gave me the same error as above. It turned out in the client.py file under replicate it tries to pick up os.environ.get("REPLICATE_API_TOKEN") on line 28 and fails, some how it returns None, I am setting it correctly in my .env file and am also able to retrieve it in my code (Just for testing) but when it comes to replicates own client.py file, it fails! don't really know why, I have just for the short term put in my Key there so now it works, but will try and search for a proper reason later.

@nabeelahmedshaikh we're not retrieving the REPLICATE_API_TOKEN in replicate.py, can you point me to the file you're looking at?

Hey, as you guys are litellm, I wouldn't know. The problem is in client.py file within the replicate module itself, if you are using the replicate library then you are inheriting the problem.

1/2

@nabeelahmedshaikh we don't use the replicate client library. Did you face this issue with litellm or replicate's python sdk?

If it's replicate's python sdk i'd recommend making an issue there (or switching to litellm 😊)

```
# !pip install litellm
from litellm import completion
import os
## set ENV variables
os.environ["REPLICATE_API_KEY"] = "replicate key"

messages = [{ "content": "Hello, how are you?", "role": "user"}]

# replicate llama-2 call
response = completion(
    model="replicate/llama-2-70b-chat:2796ee9483c3fd7aa2e171d38f4ca12251a30609463dcfd4cd76703f22e96cdf",
    messages=messages
)
```

nabeelahmedshaikh on Oct 5, 2023

Apologies, yes it's Replicate SDK but very similar error message.
