API reference

Set the `REPLICATE\_API\_TOKEN` environment variable

```
$ export REPLICATE_API_TOKEN=r8_Q0S*****
```

[Learn more about authentication](#)

Install Replicate's Python client library

```
$ pip install replicate
```

[Learn more about setup](#)

Run **meta/meta-llama-3-70b** using Replicate's API. Check out the model's [schema](#) for an overview of inputs and outputs.

```
import replicate

input = {
    "top_p": 0.9,
    "prompt": "Paper title: A proof that drinking coffee causes supernovas\n\nIn this essay, I will",
    "min_tokens": 0,
    "temperature": 0.6,
    "presence_penalty": 1.15
}

for event in replicate.stream(
    "meta/meta-llama-3-70b",
    input=input
):
    print(event, end="")
#=> " present a proof that drinking coffee causes supernovas...
```
