

Langchain error - NotImplementedError: Need to determine which default deprecation schedule to use. within ?? minor releases

Asked 1 year, 6 months ago Modified 3 months ago Viewed 8k times

I ran the bellow code. However, currently, it shows an error massage.

Vote

```
from langchain.llms import GooglePalm

api_key = 'my_API'

llm = GooglePalm(google_api_key=api_key,
                 temperature=0.1)
```

This is the error I got.

```
NotImplementedError                                Traceback (most recent call last)
<ipython-input-2-a3e32679669c> in <cell line: 7>()
      5
      6 # Create llm variable here
----> 7 llm = GooglePalm(google_api_key=api_key,
      8                 temperature=0.1)

2 frames
/usr/local/lib/python3.10/dist-packages/langchain_core/_api/deprecation.py in
warn_deprecated(since, message, name, alternative, pending, obj_type, addendum,
removal)
    293         if not removal:
    294             removal = f"in {removal}" if removal else "within ?? minor
releases"
--> 295         raise NotImplementedError(
    296             f"Need to determine which default deprecation schedule to
use. "
    297             f"{removal}"

NotImplementedError: Need to determine which default deprecation schedule to use.
within ?? minor releases
```

Can someone please help me to solve this?

I need to create the large language model variable.

-  maybe you should ask authors of langchain . Maybe they didn't create this part of code and you have to wait for newer version. Or maybe they plan to remove it from code and you need older version. – furas Dec 19, 2023 at 13:44 
-  Alright. I'll ask. – Thuthi Dilni Dec 20, 2023 at 2:01 
-  latest langchain 0.1.1 has this issue, did you find a work around? – Kesavan Ramalingam Jan 19, 2024 at 13:13

I also got the same error and also the pydantic lib error. I followed the below steps by referring to StackOverflow and other sites.

Vote

```
%pip uninstall langchain -y
pip show langchain
!pip install langchain==0.0.339
pip install google-generativeai
```

then the GooglePalm worked for me without error.

I also had a similar error, I'm using langchain==0.1.4 in which its google_palm file suggests deprecation of GooglePalm and it is replaced with langchain_google_genai.GoogleGenerativeAI

2 Make use of GoogleGenerativeAI instead; for its installation follow these steps:

- 
- 
- 
- 
- 
1. pip install --upgrade --quiet langchain-google-genai
 2. pip install -q -U google-generativeai

Then use this code:

```
from langchain_google_genai import GoogleGenerativeAI

llm = GoogleGenerativeAI(model="models/text-bison-001",
                        google_api_key=SECRET_KEY, temperature=0.1)
```

Use Google Palm API key.

I hope you find this useful.

latest langchain 0.1.1 also has this issue, as work around I have switched to text-bison model

Vote

llm = GoogleGenerativeAI(model="models/text-bison-001", google_api_key=api_key)

I encountered a similar issue after updating langchain from version 0.0.339 to 0.0.351. Before Updating langchain, my package version was 0.0.339 and it was working perfectly fine while using GooglePalm, but after updating it to 0.0.351 I faced the exact same error as yours The Implementation Error. However, I managed to resolve the problem by reverting to langchain version 0.0.339.

Vote

pip uninstall langchain
pip install langchain==0.0.339

I don't know why it is not working in langchain 0.0.351 but you can downgrade langchain untill we figure out.

Please install Langchain version 0.0.350 and it will work.

Vote

If not, run also:

pip install --upgrade vertexai google-cloud-aiplatform

As in the comment, Vertex is a paid version, you must have a Google Cloud project. However, you can use text generation for free in AI Studio; you only have to get the API key:

https://ai.google.dev/?utm_source=google&utm_medium=cpc&utm_campaign=BRAND_Core_Brand&gad_source=1

In this case:

pip install google-generativeai
