1.

How is cosine similarity used in the context of text embeddings?

1 / 1 point
- ☒

To calculate the similarity between two numerical representations

☐

To encode text into numerical vectors

☐

To compress text data for storage

☐

To visualize high-dimensional data
-  Correct

Correct! Cosine similarity is used to calculate the similarity between two numerical representations, often derived from text embeddings.

2.

Which of the following statements best describes the role of example selectors in LangChain?

1 / 1 point

☒

Example selectors help in choosing the most relevant examples to improve model responses.

☐

Example selectors ensure that prompts are executed faster by the model.

☐

Example selectors randomly choose examples to introduce variability in responses.

☐

Example selectors are used to validate the input data before processing.

 Correct

Correct! Example selectors are crucial for selecting relevant examples that enhance model performance.

3.

How does setting a maximum length for prompts in LangChain benefit model performance?

1 / 1 point

☒

It ensures that the model's responses are concise and within desired limits.

☐

It allows the model to generate longer and more detailed responses.

☐

It helps in reducing the computational cost of generating responses.

☐

It improves the model's ability to understand complex instructions.

 Correct

Correct! Setting a maximum length helps in keeping the responses concise and manageable.

4.

How does the Streamlit library assist in creating user interfaces for Python applications?

1 / 1 point

☐

It offers advanced machine learning algorithms

☐

It ensures secure communication between client and server

☒

It provides a simple way to create web-based user interfaces

☐

It is primarily used for database management

 Correct

Correct! Streamlit simplifies the creation of web-based UIs for Python applications.

5.

Which of the following tasks are important when setting up the necessary files and dependencies for a Python project?

1 / 1 point

☐

Compiling the code

☒

Installing required libraries

 Correct

Correct! Installing required libraries is crucial for the project to function properly.

☐

Writing unit tests

☒

Creating a virtual environment

 Correct

Correct! Creating a virtual environment is essential for managing dependencies.

☒

Configuring version control

 Correct

Correct! Configuring version control is an important step in setting up a project.
